DETAILED ACTION

Amendment

1. Acknowledgement is made of Amendment filed 27 January 2004.

Allowable Subject Matter

2. Claims 1-7 and 14-17 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The record of prior art fails to teach a system for tracking descriptive information about a changeable article having the descriptive data including a changeable characteristic of a given article and selectively also profile data characterizing a user and/or user preferences; and allow a user to complete a transaction involving the article including reading the descriptive data in the data store, the transaction being responsive to the descriptive data.

Montanari teaches a method for tracking descriptive information about a changeable article, having the steps of attaching a machine readable label (MRL) having a unique code to an article; at a first location, storing a correlation between descriptive information about the article and the unique code in a data store; and at one or more second locations, reading the unique code to obtain at least a portion of the descriptive information using the correlation in the data store.

O'Hagan teaches a system for tracking information 18 wherein the correlation in the data store is automatically deleted responsively to one or more predetermined events.

However, Montanari and O'Hagan, taken alone or in combination thereof, fails to specifically teach a system for tracking descriptive information about a changeable article having the descriptive data including a changeable characteristic of a given article and selectively also profile data characterizing a user and/or user preferences; and allow a user to complete a

transaction involving the article including reading the descriptive data in the data store, the transaction being responsive to the descriptive data.
